

FAQ – Dutchtub Wood

➤ Use

○ **Which features does the Dutchtub Wood offer me?**

The Dutchtub Wood is a spacious wood-fired hot tub for four people, suitable for bathing outdoors. Its exterior is made of preserved wood and gives the tub a natural and luxurious look. The fire in the fire basket heats the spiral and the water in the spiral. The warm water rises and flows into the tub. This makes the cold water on the tub's floor flow into the spiral, causing a natural circulation. The fire thus heats the water in the Dutchtub Wood and keeps it warm for as long as you like.

○ **How do I control the water's temperature?**

What happens in the spiral, also happens in the tub; warm water rises. To heat the tub efficiently, the water needs to be stirred every now and then. If the water becomes too hot, you can lower the fire or twist the spiral in the fire basket upward to adjust the temperature by heating fewer turns of the spiral. The higher the fire basket, the lower the circulation. That way the atmospheric fire can continue to burn.

➤ Safety

○ **What safety hazards does the Dutchtub Wood pose?**

The Dutchtub Wood poses the same safety hazards as a swimming pool (risk of drowning) and a fire basket (fire hazard). Never let small children bathe without parental supervision in the Dutchtub Wood and never leave the open fire unattended. Take the open fire into account when placing the Dutchtub Wood.

○ **Are there hazards for small children or other target groups?**

The spiral is heated by the fire. Keep children from coming too close to the fire or the spiral to prevent them from burning themselves. Never let small children bathe in the tub without parental supervision.

○ **What does it take to heat the Dutchtub Wood?**

To heat the Dutchtub Wood to a pleasant temperature of 38°C, you will need about a bag and a half of firewood. Heating takes approximately 2 hours, depending on the weather conditions. Maintaining the Dutchtub Wood's temperature during use takes about one bag of firewood.

➤ Maintenance

○ **What do I need to pay attention to when maintaining the Dutchtub Wood?**

The tub can be cleaned with a cloth and a mild cleaning product like Ecover. Under no circumstances use a scouring pad or aggressive cleaning products. The Dutchtub Wood can withstand salts dissolved in water, soap, hydrogen peroxide and a small amount of chloride. *The use of chlorine is not our preferred way of enjoying the Dutchtub. Water without chemicals can be reused to water the plants.* The gel coating on the surface can be repaired with specific polishing products. Scratches can often be fixed with the right products and experience. Larger holes or damaging can be repaired by a professional. Contact us for recommendations.

○ **How important is maintenance to the Dutchtub Wood?**

The better the Dutchtub Wood is kept clean, the longer you will be able to enjoy it. That's why we advise to empty the Dutchtub Wood after every use and to flush the spiral with clean water.

➤ Weather conditions

○ **Which weather conditions will the Dutchtub Wood withstand?**

The Dutchtub Wood's strong material makes it able to withstand normal weather conditions (sun, rain, snow and hail). We advise against leaving water in the Dutchtub Wood during the winter. When water freezes it expands and this may damage the spiral.

○ **How can I protect the Dutchtub Wood from various weather conditions?**

You can protect the Dutchtub Wood's inside from precipitation by using the corresponding cover. The light weight of merely 9kg makes the cover easy to pull over and remove.

➤ Material

○ **What materials does the Dutchtub Wood consist of?**

The Dutchtub is made of polyester, the spiral of RVS 316 (stainless steel). The panels are made of Platowood Fraké (preserved wood)

- **How much does the Dutchtub Wood weigh?**

The Dutchtub Wood weighs 85kg; including cover 94kg.

- **Is the Dutchtub Wood easy to move?**

Its light weight and simple design make the Dutchtub Wood easy to move for multiple people.

➤ **Packaging**

- **How will the Dutchtub Wood be packaged?**

The Dutchtub will be packaged in a wooden crate.

- **What packaging materials are used?**

Wood.
